Gianfranco Casetta

Infrastructure Specialist

DevOps and Cloud Engineering on AWS

I started out in datacenter field support, installing storage and running VMware environments, and today I automate how infrastructure changes ship on AWS. Nearly six years across on-prem and cloud taught me to build things others can trust: pipelines that document themselves and releases that pass audit without extra work. I do my best work backing my team and staying calm under pressure.

Work experience

Infrastructure Specialist

Prex May 2024 – Present CABA, Argentina

- Work across 50+ infrastructure repos, one stack per country, and built and own the shared **CI/CD** repo and its backend (Bitbucket Pipelines for Python, SageMaker and Terraform).
- Automated Terraform **change management** with security and audit checks: plans and applies are logged on the Jira ticket and approvals sync with the pull request, so documenting and approving a change takes no manual work.
- Built the infrastructure and release flow for a real-time **fraud scoring** model on SageMaker, now heading to production.
- Automated maintenance with **Rundeck and Ansible**: ALB traffic shifting for updates, instance snapshots and unattended Ubuntu patching.
- Taking part in the move of services from EC2 hosts to **EKS** pods, alongside the SRE team.
- Operate core AWS (EC2, ALB, IAM, VPC, CloudWatch) and a Windows Server domain controller, troubleshoot in **Datadog** and run Tenable scans under **PCI-DSS**.

Infrastructure Field Support

VR4 Oct 2022 – Apr 2024 CABA, Argentina

- Answered on-site part replacement calls for **NetApp** systems (disks, motherboards) as a NetApp partner.
- Supported the IT infrastructure of small and mid-size clients remotely, on their VPS or on servers through iLO.
- Saw client projects through: on-prem to **cloud migrations**, storage mirroring and MetroCluster setups.

Software-Defined Datacenter Field Support

Wetcom Jan 2021 – Oct 2022 CABA, Argentina

- Managed **VMware** for a pod of about 10 clients: ESXi host and VM lifecycle in vCenter, plus some vSAN.
- Kept VM and datastore backups running in **Veeam B&R**, fixing the causes of warnings and errors.

Education

High School Degree in Information Technology
Instituto Leonardo Murialdo · Villa Bosch · 2013 – 2019

Skills

Cloud and IaC
AWS · EKS · SageMaker · Terraform · IAM · VPC

CI/CD and automation
Bitbucket Pipelines · Git · Jira automation · Rundeck · Ansible · MLOps

Systems and containers
Ubuntu · Docker · Kubernetes · Windows Server · Active Directory

Security and monitoring
Tenable · PCI-DSS · Datadog · CloudWatch · Pipeline security checks

Datacenter
VMware vSphere · vSAN · NetApp · MetroCluster · SAN / NAS · Veeam B&R

Certifications

AWS Certified Cloud Practitioner
AWS · Nov 2023

NetApp Certified Storage Installation Engineer
NetApp · Oct 2023

NetApp Certified Technology Associate
NetApp · Jul 2023
